Prostate TLC™ Supports Male Health

During a man's lifetime, the prostate undergoes changes that can eventually lead to health challenges. For instance, prostate enlargement is a common condition that can cause urination problems and other discomforts, particularly in men over age 40. Fortunately, medical scientists have demonstrated that the prostate is responsive to nutritional substances, such as certain compounds in tomatoes. Prostate TLC is an innovative supplement that combines many of the best natural substances known to man for promoting prostate health.*

The National Cancer Institute has reported that DHT (dihydro-testosterone), a form of testosterone, plays a role in prostate enlargement and is believed to be involved in the development of other prostate problems. Scientists believe prostate enlargement may be controlled by regulating levels of DHT.*

Unicity Network's Prostate TLC contains several remarkable ingredients that support prostate health. Alphastat™ is a patented compound that combines two ingredients (saw palmetto and astaxanthin) currently being studied for their effects on male prostate health, including DHT regulation. Other important ingredients in this formulation include lycopene, stinging nettle root, selenium and pumpkin seed oil.*

Prostate TLC contains:

Alphastat, a patented complex of saw palmetto and astaxanthin, is presently undergoing scientific research to demonstrate the benefits of this unique combination.*

Saw palmetto was used by ancient Mayans for the maintenance of genitourinary tract health. Prostate TLC contains saw palmetto standardized to provide 320 mg of fatty acids per day, which is the same level used in many research studies.*

Astaxanthin is a fat-soluble carotenoid. In its natural form, astaxanthin provides the pinkish color found in fish such as salmon.*

Lycopene is a carotenoid that constitutes the red pigment found in tomatoes. Human blood and male testes have been shown to contain high levels of lycopene.

Stinging nettle root (*Urtica dioica*) is a botanical with a long history of use. In Prostate TLC, this ingredient is standardized to amino acids and beta sitosterol, which are believed to be a few of its active ingredients.

Selenium is an important mineral, derived from high-selenium yeast for maximum bioavailability. The selenium contained in Prostate TLC is the same ingredient being used in various clinical trials around the world in support of men's health.*

Pumpkin seed oil provides a base for the other ingredients.

- The prostate weighs about 15 - 25 grams (about the same size and shape as a walnut) and is wrapped around a tube called the urethra.
- The prostate is made up of both muscular and glandular tissues.

*-These statements have not been evaluated by the Food & Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

- Helps keep the body's cells healthy*
- Supports healthy levels of DHT, a compound involved in prostate enlargement and urinary health*

Prostate enlargement is a common condition that can cause urination problems and other discomforts, particularly in men over age 40.

Prostate TLC™

Supports Male Health

Supplement Facts		
Serving Size: 1 Softgel Capsule		
Amount Per Serving		
Selenium (from SelenoExcell™ as selenium yeast)	25 mcg	36%
Lycopene (from Lyc-o-Mato™)	1.5 mg	†
Saw Palmetto Fruit Extract (from Alphastat™, standardized to 85% fatty acids = 160 mg)	195mg	†
Astaxanthin (from Alphastat™)	1.0 mg	†
Proprietary Blend	150.00 mg	
Stinging Nettle Root (standardized to 5% amino acids and 0.8% Beta-Sitosterol)		†
Pumpkin Seed Oil		†
† Daily Value not established.		

Other Ingredients: Gelatin, Glycerin, Soybean Oil, Partially Hydrogenated Soybean Oil, Beeswax, Soy Lecithin, Natural Caramel Color.

Research Brief

The male prostate is essential in human reproduction. This walnut-sized structure surrounds the neck of the urethra and bladder and is regulated by testosterone and related hormones. The primary purpose of the prostate, which consists of both glandular and muscular tissue, is to release a substance that makes semen into a liquid. Tubes from the testicles carry sperm to the prostate, where the sperm are mixed with prostate and seminal vesicle fluids and then ejaculated through ducts that connect to the urethra.

The prostate is made of up several tissue zones and cell types. The peripheral zone is the area that can be manually examined by a doctor for abnormalities. The transition zone, which normally makes up less than five percent of the prostate's volume, is where benign prostatic hyperplasia (BPH) – or prostate enlargement – can occur. The central zone is where the seminal vesicles attach to the prostate. The anterior fibromuscular stroma zone is where the urethral sphincter is anchored, which controls urine flow. Regarding cell types in the prostate, epithelial cells make up the organ's glandular portion and stromal cells make up the surrounding muscle and connective tissues. The complex interactions between these two types of cells and what role is played by testosterone and other hormones are the subject of continuing scientific research. Unfortunately, the prostate's proximity to the bladder and urethra causes health problems for men after the organ's reproductive usefulness has passed. To monitor prostate health, middle-aged men should consult with their health care professionals about monitoring levels of prostate-specific antigen (PSA), a protein made by the prostate's glandular cells. Elevated levels of PSA can indicate possible health concerns that need to be addressed.

Frequently Asked Questions

- Q** Can younger men take Prostate TLC as an aid in maintaining prostate health?
- A** Yes. It can be taken by men of all ages to maintain prostate health.
- Q** How much selenium is in Prostate TLC?
- A** Each serving (one capsule) contains 25 mcg of high-selenium yeast.
- Q** What is the active compound in the saw palmetto contained in ProstateTLC? How much of that active compound is provided in the daily serving of two softgel capsules?
- A** The saw palmetto extract's active ingredient is fatty acids. Each Prostate TLC softgel capsule contains saw palmetto fruit extract standardized to provide 160 mg of fatty acids, so the daily amount provided is 320 mg of fatty acids.
- Q** If a man is older and he has an existing prostate condition, can he take more than what is recommended?
- A** We can recommend only what is on the label.
